# What is osteoarthritis?

Osteoarthritis is the technical term for chronic joint wear and tear, and is the most common joint condition affecting cats. It's an uncomfortable and progressive condition leading to reduced mobility.

## Common causes:

**Excess weight:** extra weight means extra stress on the joints.

**Accidents or trauma:** any event – major or minor – that damages the joint can lead to osteoarthritis. Even daily wear can add up to joint problems eventually.

**Breed:** some breeds are prone to conditions which can lead to osteoarthritis.

**Age:** osteoarthritis is often seen in older cats.

## Does your cat have joint conditions?

### Signs

Has trouble using the litter tray

Moves less

Hides or avoids interaction

Grooms with difficulty

Hesitates to jump on or off surfaces

# How can the right food help?

What you feed your cat plays an important role in supporting your cats mobility.

## Essential fatty acids

Effective levels of omega-3 fatty acids, including high levels of DHA from fish oil, to promote joint and kidney health. Helps break the cycle of inflammation.

## High-quality proteins

High level of essential amino acids to help build muscle mass and support mobility.

## Antioxidants

Neutralise free radicals, promoting a healthy immune system.

## Taste

Great taste cats can't wait to eat.

## Controlled minerals

Controlled phosphorus and low sodium levels take the stress off your cat's kidneys.

## Alertness & vitality

Enriched with antioxidants to support alertness and vitality in older cats.

# Managing osteoarthritis

Osteoarthritis is an uncomfortable disease that is slowly progressive. Early and tailored management, including **the right clinical nutrition**, is crucial and **can significantly improve the long-term well-being and mobility of your cat**. Effective weight management, gentle low-impact exercise, and medication when needed, are also key to keeping your cat comfortably mobile.

**Hill's Prescription Diet Joint Care** foods are made with essential omega-3 fatty acids, including DHA from fish oil and antioxidants. With nutrition clinically proven to support joint health and also address kidney conditions, cats with osteoarthritis can get back on their feet again!

# Hills Prescription Diet Joint Care foods

## k/d+Mobility

---

📄 For cats with both kidney and joint conditions

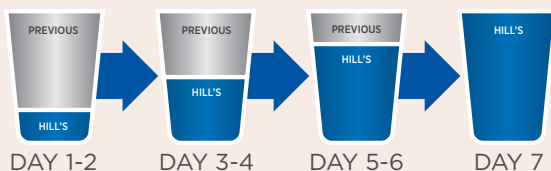

+ Clinically proven nutrition to support kidney & heart function and cats' ability to run, climb and jump again in as little as 28 days<sup>1</sup>

# How to introduce the new food?

- Gradually introduce the new food over a 7-day period
- Mix the new food with your pet's current food, gradually increasing the amount until only new food is fed
- Always refer to the feeding guide on the pack

This is a general guideline only. Your vet will recommend a transition plan specific to your pet's needs.
